EDUCATION

Asia Pacific University of Technology & Innovation (APU)
Faculty of Computing
Master of Science in Artificial Intelligence

Kuala Lumpur, Malaysia
Oct 2024 – Oct 2025
CGPA: 3.4

University of Westminster
Cavendish Campus
Bachelor in Science in Computer Science (*Upper Second Class Honours*)

Westminster, London
Sep 2018 – Nov 2023
GPA: 3.6

SKILLS

Languages: Python, TypeScript, C++, Java, SQL, JavaScript, MATLAB
AI/ML: TensorFlow, PyTorch, Scikit-learn, NLP, Deep Learning, Computer Vision, Sensor Fusion
Robotics: ROS, Robot Studio, RAPID, Robot Navigation, Path Planning, Motion Control
Frameworks: Django, Flask, Node.js, Firebase, MongoDB, MySQL, AWS, Azure
Front End: Flutter, React, React Native, SwiftUI

WORK EXPERIENCE

CDAZZDEV

Machine Learning Engineer (Remote)

Seattle, Washington, United States
Apr 2026 – Present

- Designing and developing machine learning pipelines and model architectures for production-grade AI applications.
- Implementing deep learning solutions leveraging computer vision and NLP techniques across real-world datasets.
- Collaborating with cross-functional engineering teams in an agile remote environment across time zones.
- Evaluating and fine-tuning pre-trained models for domain-specific tasks, optimising for both accuracy and inference efficiency.

Tactik AU

Senior Web Developer (Remote)

Dandenong South, Australia
May 2021 – Dec 2022

- Architected and delivered full-stack web platforms using React and Firebase for 15 early-stage startups, directly contributing to a 30% increase in online visibility and 20% uplift in lead generation.
- Led end-to-end UI/UX development cycles, conducting user research to define and prioritise features that improved website engagement by 20%.
- Built standardised data pipelines and real-time reporting dashboards, enabling data-driven decision-making across multiple client products simultaneously.

the Radiant

Senior Web Developer

Colombo, Sri Lanka
Jan 2021 – May 2021

- Designed and implemented a hybrid cloud infrastructure combining AWS and on-premise resources, reducing server downtime by 30% and cutting annual infrastructure costs by LKR 50,000.
- Developed Python-based automation for invoice generation and contract management, reducing manual data entry errors by 80% and reclaiming over 100 staff hours per month.

UniqSolutions

Junior Web Developer

Colombo, Sri Lanka
Aug 2020 – Oct 2020

- Built and deployed scalable RESTful API servers using PHP and SQL powering a car rental booking platform, improving reservation processing efficiency by 30%.
- Engineered an IoT-integrated employee status tracking system using React Native, reducing manual tracking errors by 50% and improving operational visibility.

Kent Institute

Teaching Assistant (Part Time)

Colombo, Sri Lanka
May 2017 – Dec 2021

- Tutored 40+ secondary school students in Computer Science and Mathematics for GCSE examinations, consistently improving pass rates through tailored instruction.
- Developed original tutoring materials and practice tests adapted to diverse learning abilities, simplifying complex technical concepts into accessible, structured lessons.

PROJECTS – (github)

- **Photokana** – End-to-end photo booth system with kiosk PWA, USB camera capture, template-based print layout generation, and CUPS printer integration on Raspberry Pi (Node.js, Express, Sharp, Supabase)
- **Clinical Flow** – AI-powered clinical workflow platform streamlining patient intake, triage, and care coordination with real-time dashboards and automation for the Department of Physiotherapy, Faculty of Medicine, University of Colombo (Next.js, TypeScript, PostgreSQL, Prisma, OpenAI API)
- **The Lighthouse** – Full-stack marketing site for a large-scale events company, featuring service showcases, dynamic project galleries, and an authenticated admin dashboard with image uploads (React, Firebase, Vite)
- **Multimodal Pneumonia Diagnosis (Thesis)** – Deep learning framework combining chest X-rays with EMR data for pneumonia diagnosis using late fusion, Grad-CAM and SHAP explainability (Python, TensorFlow)
- **AlphabetBot** – Industrial robot programming project for drawing alphabet letters using precise motion control and trajectory planning (ABB RobotStudio, RAPID)
- **Twitter Sentiment Analysis** – Reproducible deep learning comparison of BiLSTM/GRU vs DistilBERT for sentiment classification (Python, PyTorch, HuggingFace)
- **ONCO (Contributor)** – Contributed to an AI-based cancer diagnosis platform using deep learning and ML for prognosis (Flutter, Python, TensorFlow, Flask, Azure)
- **Text Classification System** – NLP tool for sentiment and spam detection (Python, Scikit-learn, Streamlit)
- **BAWT – Behaviour Analysis with Text** – NLP-based model to analyze human chat behavior and detect communication patterns (Python, Jupyter, NLP)
- **Pash** – AI-powered expense splitting application using natural language processing to parse and allocate shared bills (Next.js, Supabase, Claude AI)
- **Carbon Compass** – NLP-based system for extracting environmental metrics and detecting greenwashing in corporate sustainability reports (Python, Machine Learning, NLP)
- **Spa Ceylon Bot** – AI-driven shopping assistant with conversational interface and personalized product recommendations (Node.js, React, Claude AI)
- **Gedara Rent** – Full-stack property rental platform with authentication, booking workflows, payment integration, and role-based dashboards (Next.js, TypeScript, Prisma, Stripe)
- **Inventory Manager** – Inventory and production management system with order tracking, supplier/customer modules, and analytics dashboards (React, TypeScript, Vite)
- **Spelling Correction System** – Typo correction tool using edit distance and token-level NLP (Python, NLTK)
- **Budget Buddy** – Personal finance tracker with categorized budgets and real-time sync (Flutter, Firebase)
- **WeatherAirQuality** – Display real-time air quality index and weather data (Swift, Xcode)
- **WhatsApp Clone** – Real-time chat app with media sharing and authentication (Flutter, Firebase, Socket.io)
- **Uber Clone** – Ride-hailing app with live tracking and user role switching (Flutter)
- **Habit Ease** – Track daily habits with streaks, reminders, charts, and local storage (Flutter, Hive)
- **TikTok Clone** – A vertical video scroll app mimicking TikTok's interface with local video assets (Flutter, Dart)
- **Instagram Clone** – A dynamic photo feed, story viewer, and search with the Unsplash API (Flutter, Dart)

AWARDS

SLIIT Datathon

July 2020

- 3rd Place – Participated in the Datathon Final Competition, representing UOW, where my team and I tackled approximately 10 algorithm questions and presented a Covid Area Recognition app.

IIT Hackathon

April 2019

- Runner's Up – Participated in a Hackathon with my team where we had to build a site out of pure HTML/CSS and JS.
